EDUCATION

Baruch College, GPA: 3.6/4.0

New York, New York

- Bachelor of Business Administration International Business and Marketing. *Head of Marketing Lead for VSA*
- Waseda University, Exchange Program in Tokyo, Japan, *Graphic Designer for Waseda Paddy*

EXPERIENCE

MJHS Health System HomeFirst ElderPlan

New York, New York

Care Management Coordinator

December 2024 - May 2025

- Built an internal automation tool to address workflow inefficiencies and presented findings to leadership, translating technical solutions into actionable narrative. Refer to project below
- Managed and assisted 100+ members by updating and regulating information on Payor, Guiding Care and Healthedge
- Handled inbound member calls, translating unstructured requests into workflows across multiple care platforms

Botnet LLC

New York, New York

AI Systems Engineer

August 2023 - August 2024

- Designed the AI routing layer that connects bots to users' existing LLM subscriptions, eliminating platform-side inference costs entirely while keeping response latency within 15% of native AI provider performance
- Built the runtime framework that gives each user's bot its own isolated cloud environment with access to common workflow tools — email, Slack, browser actions, reservations, and third-party APIs
- Lead first-party hardware device integration and built an SDK for OEM, developed connections CI/CD best practices

PROJECTS

KotobaVault | Claude API, Python, Obsidian, Anki Connect

In Progress

- Designing and prototyping an AI-enabled language acquisition system, architecting modular pipelines for data ingestion, knowledge graph integration, and spaced repetition in alignment with iterative Agile development practices
- Developing and testing AI model components for vocabulary cross-referencing and pattern recognition, applying structured validation protocols to ensure output accuracy against personal knowledge graph linkages
- Scoping a browser extension deployment layer to deliver real-time AI inference during foreign-language content consumption, with design considerations for performance requirements, API security, and user data handling

Personal AI Agent Ecosystem | Claude API, JavaScript, REST APIs, Oura Ring API, Discord Webhook

January 2026

- Designed, developed, and deployed a production-grade autonomous AI agent system integrating multiple live third-party data sources (biometric, weather, calendar), implementing secure management and structured data pipelines
- Architected a five-agent AI deployment with defined data inputs, processing rules, and output channels per agent — demonstrating applied AI system design with emphasis on modularity, reliability, and sustained production delivery
- Implemented persona-conditioned prompt engineering across distinct agent voices, applying structured LLM control to maintain tonal consistency, schema adherence, and contextual responsiveness

HealthEdge Workflow Automation Script | JavaScript, TypeScript, Chrome Scripting API

April 2025

- Developed a browser extension on free time to automate data entry and modal interaction within internal Medicaid portals, reducing processing time by 45 min - 1 hour every day for case workflows (DME, OOSA)
- Created a mock HealthEdge from scratch to mimic the IDs of application without interfering with work

Clinical Data Insights | PostgreSQL, Tableau, Python, NumPy

December 2025

- Developed a risk scoring model that ingested third-party vendor data and applied compliance rule cross-referencing to flag high-risk vendors with 95% accuracy across expired certifications and missing security attestations
- Automated generation of compliance reports in PDF/Excel, reducing manual review effort by 40% and establishing a reusable framework for supply chain visibility and risk assessment

SKILLS

- **Programming:** Python (Pandas, NumPy, Matplotlib, Scikit-learn), Flask, TypeScript, JavaScript, HTML, CSS
- **Data & Analytics Tools:** AWS, Excel, PowerPoint, Tableau, SQL, Python, PostgreSQL, Word, Google Cloud Platform
- **Technical Skills:** Data cleaning, trend analysis, basic statistical modeling, data visualization, dashboard reporting
